

Laundry Care Program

SERVICE

A FILIPSmart technician will schedule visits to ensure the chemicals are being properly dispensed to your commercial washers. While we are there performing maintenance, inventory will be provided to help you maintain a healthy stock of products which helps reduce costs.

EDUCATION

One thing we pride our self with is continuing education. When we are performing our scheduled PM, we will educate selected staff of our findings to familiarize those on things to look for such as possible wearable item issues, and cleaning procedures for your laundry systems.

DOCUMENTATION

With each visit, handwritten reports are provided with documentation of any and all preventative maintenance that was performed including inventory of chemicals related and any suggestions. The report will then be scanned and then transferred electronically to those who requires a paper trail of that visit. Included on the documentation will be your next scheduled preventative maintenance day.
